

WATER EFFICIENCY POLICY

Our organization Orjin Teknik Yönetim Hizmetleri A.Ş., which operates in the management of business centers and facilities, is committed to implementing the TS EN ISO 46001 Water Efficiency Management System to sustainably manage water resources and increase water efficiency. In this context,

- To implement the water efficiency management system in our organization's activities, to ensure its effectiveness and to continuously improve it,
- To fully comply with legal and other requirements regarding water use, water efficiency, wastewater management and pollution control,
- To establish goals and objectives for reducing water consumption by determining, monitoring and setting targets for water performance indicators,
- Implementing technological solutions and good practices that minimize water use and support reuse and recycling,
- Using water efficiency as one of the evaluation criteria in new facility, equipment and process designs,
- To prefer highly water efficient products, equipment and services in the procurement processes,
- To provide training and awareness programs to our employees, contractors and related parties on water efficiency, water saving and sustainable water management,
- To take responsibility for protecting underground and surface water resources, reducing the effects of climate change on water resources, and leaving a livable environment for future generations,
- Ensure that the policy is understood, implemented and accessible to all employees, contractors and interested parties

We undertake.
